

# Seminar 1

Leo Karsikas leoka@kth.se

1 April 2024

## Reflection

Approximately how much time, including lectures and exercises, have you spent preparing for the seminar?

Since I was doing this seminar in collaboration with a person who already completed this seminar last year, I didn't spend nearly as much as the recommended time. I would approximate the total amount of hours spent on this exercise to 8 hours.

What have you learned from the problems presented?

I have learned how to properly structure the process of thinking for creating the DM and SSD. I also asked myself questions about what could be improved.

What was difficult and what was easy?

I would argue the challenge of this assignment was in fixing the end cases and avoiding naive and programmatic DMs.

How have you worked when solving the problems?  
The best way to tackle this challenge was to discuss the different cases in the group. Since this exercise doesn't have only one right answer.

What questions remain regarding the problems?

If the printer was necessary as class for the DM.

Do you have any suggestions regarding the course? Both suggestions for this course.

From my perspective it would be difficult to imply some specific suggestions regarding this course.
